

# Antarctica

Can you find the continent of Antarctica on the map?

On lots of maps and globes, Antarctica is white.  
Why do you think that is?

# Hot and Cold Places

Have you ever visited somewhere really hot?

# Hot and Cold Places

How about somewhere really cold?

# Hot and Cold Places

What did you wear?  
What did you do there?

Where do you like being best,  
somewhere hot or somewhere cold?

# Hot and Cold Places

Lots of places are hot during the summer  
and cold during the winter.

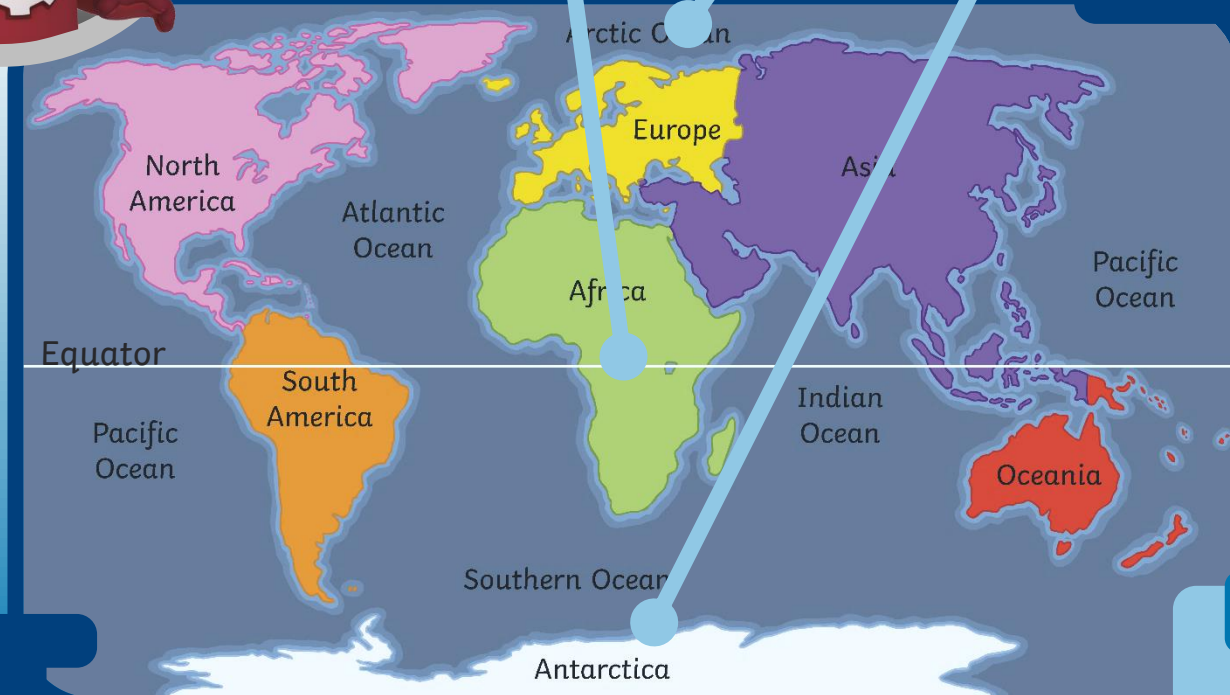

Can you name any hot or cold places?

# Hot and Cold Places

Geographic! Some places are cold all of the time. These places are at the **top** and **bottom** of the Earth. Other places are hot nearly all the time. These places are in the **middle** of the Earth.

# Hot and Cold Places

The middle of the Earth is called the Equator. Most places at the Equator are very warm. **However, if a location near the Equator is on very high ground, like on a mountain top, then it might still be cold.**

# Your Task

Draw what you would pack for a holiday to

1. Antarctica
2. A country in the equator

## Challenge:

Explain your choices. For example, I will pack sunglasses for my holiday in a country in the equator so I can protect my eyes from the hot sun.
