Common Factors

Can you find the common factors of the following pairs of number?

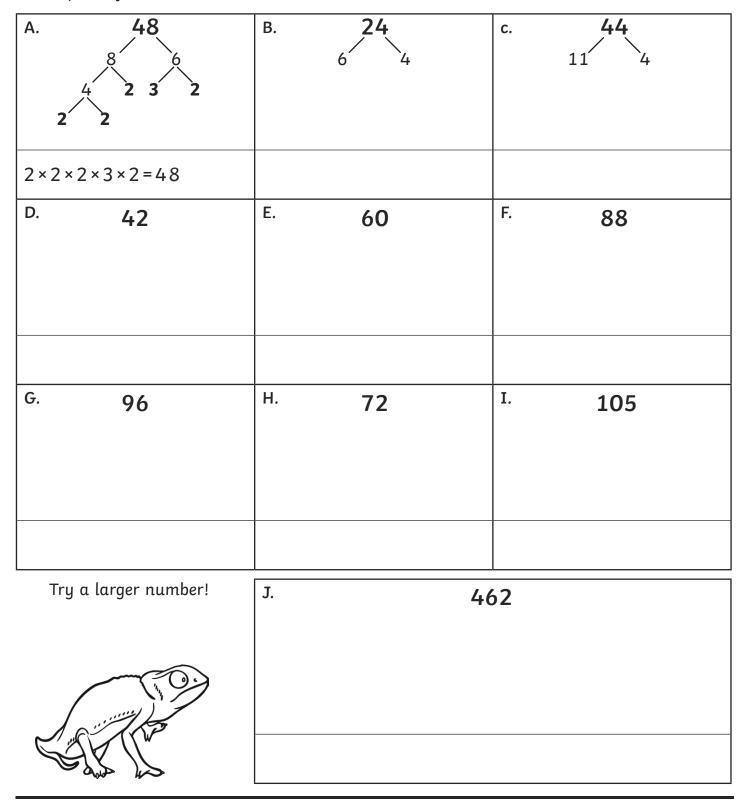

Can you find the common factors of the following trios of number?

Finding Prime Factors

Know and use the vocabulary of prime numbers, prime factors and composite (non-prime) numbers.

Every number has a unique set of prime factors. (Prime numbers can be multiplied together to make the number.) These can be found using a "Factor Tree". Find any factors of the number, then the factors of those numbers until you can't go any further – the resulting numbers will be the prime factors.

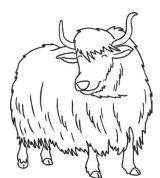

Identifying Prime Numbers to 100

Establish whether a number up to 100 is prime and recall prime numbers up to 19.

Use any method you wish to find all the prime numbers between **0 and 100**, and then check your answers. Did you make any mistakes? Can you see where you went wrong?

Don't forget that not all odd numbers are prime numbers – use your times table knowledge to help you!

Recalling Prime Numbers 0-19

Establish whether a number up to 100 is prime and recall prime numbers up to 19.

Knowing the first few prime numbers can give you a real advantage when answering questions and calculating prime factors. Complete this sheet to deepen your familiarisation.

Allow yourself some time to look at the prime numbers. Look carefully for the odd numbers which are missing and think about why. When you are ready fold the sheet over on the fold line and complete the tasks below...

2, 3, 5, 7, 11, 13, 17, 19

A. Write out the prime numbers between 0-19 with your weaker hand!

B. Write the prime numbers out in descending order (highest to lowest).

C. Which three prime numbers are missing?

13, 7, 19, 2, 5, _____, ____, ____

D. Circle the prime numbers.

Division Word Problems – Interpreting Answers

Divide numbers up to four digits by a one-digit number using the formal written method of short division and interpret remainders appropriately for the context.

Complete the necessary calculation, and then decide if your answer needs to be rounded up or down.

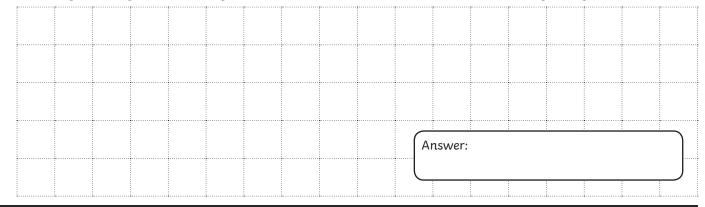

1. Each glass of fresh apple juice made at the café requires the juice of four apples. If they have 391 apples, how many full glasses of juice can they make?

2. Bilal and Georgina are planting seeds. They have 863 to plant and they decide to plant eight in each pot. How many pots will they need altogether?

Using and Recognising Square and Cube Numbers

Recognise and use square numbers and cube numbers, and the notation for squared $(^{2})$ and cubed $(^{3})$.

Square Numbers

The product of a number multiplied by itself.

Can be illustrated as a square, e.g

 $2^2 = 2$ squared = $2 \times 2 = 4$

A. Complete the table.

| 1 ² | 1 × 1 | 1 |
|-----------------|-------|-----|
| 2 ² | | 4 |
| 3 ² | 3 × 3 | |

| 10 ² | | 100 |

C. Calculate the missing numbers.

| a) $7^2 + 4^3 =$ | b) $8^2 + 10^2 =$ | c) $5^3 - 5^2 =$ |
|---------------------------------------|------------------------|-----------------------|
| d) 5 ² + = 89 | e) 8 ² = 17 | f) $3^2 \times 2^3 =$ |

| j) 10 ³ - 2 ² = | k) 100 ² = | l)2 = 144 |

Cube Numbers

The product of multiplying a digit by itself three times.

Can be illustrated as a cube, e.g.

 $2^3 = 2$ cubed = $2 \times 2 \times 2 = 8$

B. Complete the table.

| 1 ³ | 1 × 1 × 1 | 1 |
|-----------------|-----------|-----|
| 2 ³ | 2 × 2 × 2 | |
| 3 ³ | | 27 |
| | 4 × 4 × 4 | 64 |
